Summary

AI/ML-focused Computer Science graduate with hands-on experience building predictive models, computer vision systems, and analytics solutions through internships. Strong in Python and SQL with a passion for solving real-world problems using data.

Skills

Programming: Python, SQL **AI/ML:** Scikit-learn, TensorFlow, OpenCV **Data Analysis:** Pandas, NumPy, EDA, Excel

Visualization: Matplotlib, Seaborn, Power BI, Tableau **Tools:** Git, Vercel, Odoo ERP

Education

B.Tech in Computer Science Engineering (AIML) Bharati Vidyapeeth College of Engineering (CGPA: 8.9/10) Dec 2021 – Jun 2025

Aditya Junior College (Class XII) – 89.6% 2019 – 2021

Atimya VidyaPeeth (Class X) – 80% 2018 – 2019

Experience

IT Executive — OM Ship Suppliers Mar 2026 – Apr 2026
Successfully managed Odoo ERP operations, provided comprehensive user support, and optimized daily technical tasks efficiently.

IT Executive — Genesis Aug 2025 – Mar 2026
Handled extensive IT support infrastructure, system troubleshooting, and routine maintenance across critical corporate business operations.

Internships

Intern — Deendayal Port Authority Jun 2024 – Aug 2024
Developed automated data-driven analytics solutions using MySQL and Python while successfully deploying predictive artificial intelligence models.

Intern — Techno Hacks EdTech May 2024 – Jun 2024
Implemented core machine learning algorithms utilizing Python libraries alongside Scikit-learn for advanced real-world predictive modeling.

Intern — Verzeo Sep 2022 – Oct 2022
Designed robust machine learning models using Python and TensorFlow while conducting thorough data preprocessing and system evaluation.

Projects

- **Skin Care Recommendation System** (Feb 2025 – Apr 2025)
Built an advanced machine learning pipeline to recommend skincare products based on individual types.
- **Face Expression Recognition Using CNN** (Jul 2024)
Engineered a real-time computer vision pipeline integrating face detection and deep learning expression models.
- **Ignite Guard (IoT Gas Detection)** (Apr 2024)
Developed a smart IoT gas detection system providing real-time safety alerts and improving reliability.
- **Pedestrian Detection Using OpenCV** (Nov 2024)
– Designed an efficient real-time pedestrian detection system processing live video streams for automated public safety.
- **ECG Prediction Using ML** (Sep 2023)
– Engineered a complex machine learning pipeline to accurately predict cardiac abnormalities using time-series analysis.

Certifications

- Complete SQL Bootcamp — Udemy
- Introduction to Data Analytics — Coursera
- Python 101 for Data Science — IBM
- Data Analytics Essentials — Cisco Networking Academy
